Greg,

Looks like this one can come off my list of potential sites. I think we probably need a short decision form documenting that the State has handled the situation, then I'll remove it from my list. Sound fair?

Thanks Jim,

This is a project for which DEQ deserves kudos. They oversaw this multi-million \$\$ removal action that was of high interest to EPA and Forest Service. The initial plan did not call for daylighting Georgetown Creek. This is private patented land, but Forest Service land downstream. Threat was that the culvert that carried G-town Creek through the site would eventually fail (it had already reached it's engineered life span). We pushed DEQ to push NuWest to daylight the Creek. The implicit understanding was that if they didn't do it, we'd step in. They stepped up and got a good project done.
